Summary of the Dataset

Structure of the Directory

This dataset consists of two primary directories, specifically "Raw Data" and "Augmented Data". Each of these directories encompasses twenty-six sub-directories with the category names of the components. These include-

1. Battery
2. DVDRom
3. Hinge
4. Keyboard
5. Motherboard
6. DCCable
7. PowerSwitch
8. RAM
9. ScrewKit
10. USBPort
11. WiFiCard
12. Speaker
13. CMOSBattery
14. HardDiskDrive
15. WebCam
16. LCDScreen
17. Bezel
18. Heatsink
19. SSD
20. CPUFan
21. TouchPad
22. Processor
23. RAMCover
24. BasePanel
25. TopPanel
26. LVDSCable.

Each sub-directory within the "Raw Data" directory comprises 140 high-quality images, whereas the numbers for the "Augmented Data" directories amount to 980. The structure of the folders and sub-folders to classify the component images is displayed in **Fig. 1**.

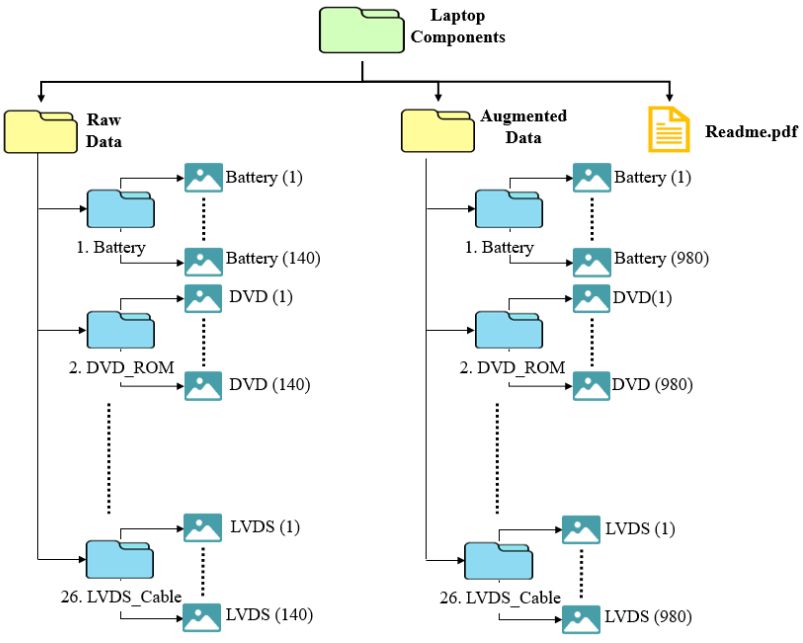

Fig. 1. Laptop Components Dataset Distribution

The following table presents a comprehensive summary of all the details about the collection of data.

Table 1: A Quick Glance at the Laptop Components Dataset.

Type of data:	Image data in 1200×900 pixel
Data format	JPG
Number of images	In the raw section, there are 3,640 image data of 475 MB and in the augmented section, there are 25,480 images of 3.24 GB of 26 categories of components, which is in total 29,120 images of 3.64 GB.
Number of categories	Twenty-six
Distribution of data	All the categories in the raw data contain 140 images each, and in the augmented section, it is 980, which in total is 29,120.
Applicability	The dataset will be highly helpful in the field of automation of recycling laptop components along with reducing e-waste materials
